

1. The innovation production issue: Continued fragmentation of research ; “silo” forming, instead of integration; lack of long term vision. H2020 addresses primarily short term whereas research needs about 10 years to produce results: *need more long term vision / consistent and coherent*

4. ECTRI proposes (July 2014 paper for H2020) 5 main research areas (WP 2016 and beyond):

(I) Individual users’ mobility behaviour

(II) Multimodal mobility systems and services

(III) Advanced logistic services

(IV) Resilient and secure transport systems

(V) Research support for decision-making

2. The research content focus issue: Still focusing on addressing the problems through transport means (automobile / rail / aviation) and *less* the transport system.
Need more integration and long term vision

3. Need for more emphasis towards:

- ❖ Economy / improving competitiveness;
- ❖ “Social aspects” (users’ needs, acceptance, accessibility for all users);
- ❖ Behavioural aspects;
- ❖ Equity issues, central vs periphery / rural regions.

6th European Innovation Summit

A Mandate for Innovation in Europe

17 - 20 November 2014 European Parliament, Brussels
